

PM10-TEQ

Approach to a Health-Oriented Descriptor of Particulate Air Pollution (... to Rescue a Disputable Metric)

Markus Kasper, Matter Engineering AG

Andreas Mayer, TTM

Peter Gehr, University of Berne

Christian Leuenberger, Martin Schmitz, LeuPro

Heinz Burtscher, University of Applied Sciences NW Switzerland

Norbert Heeb, EMPA

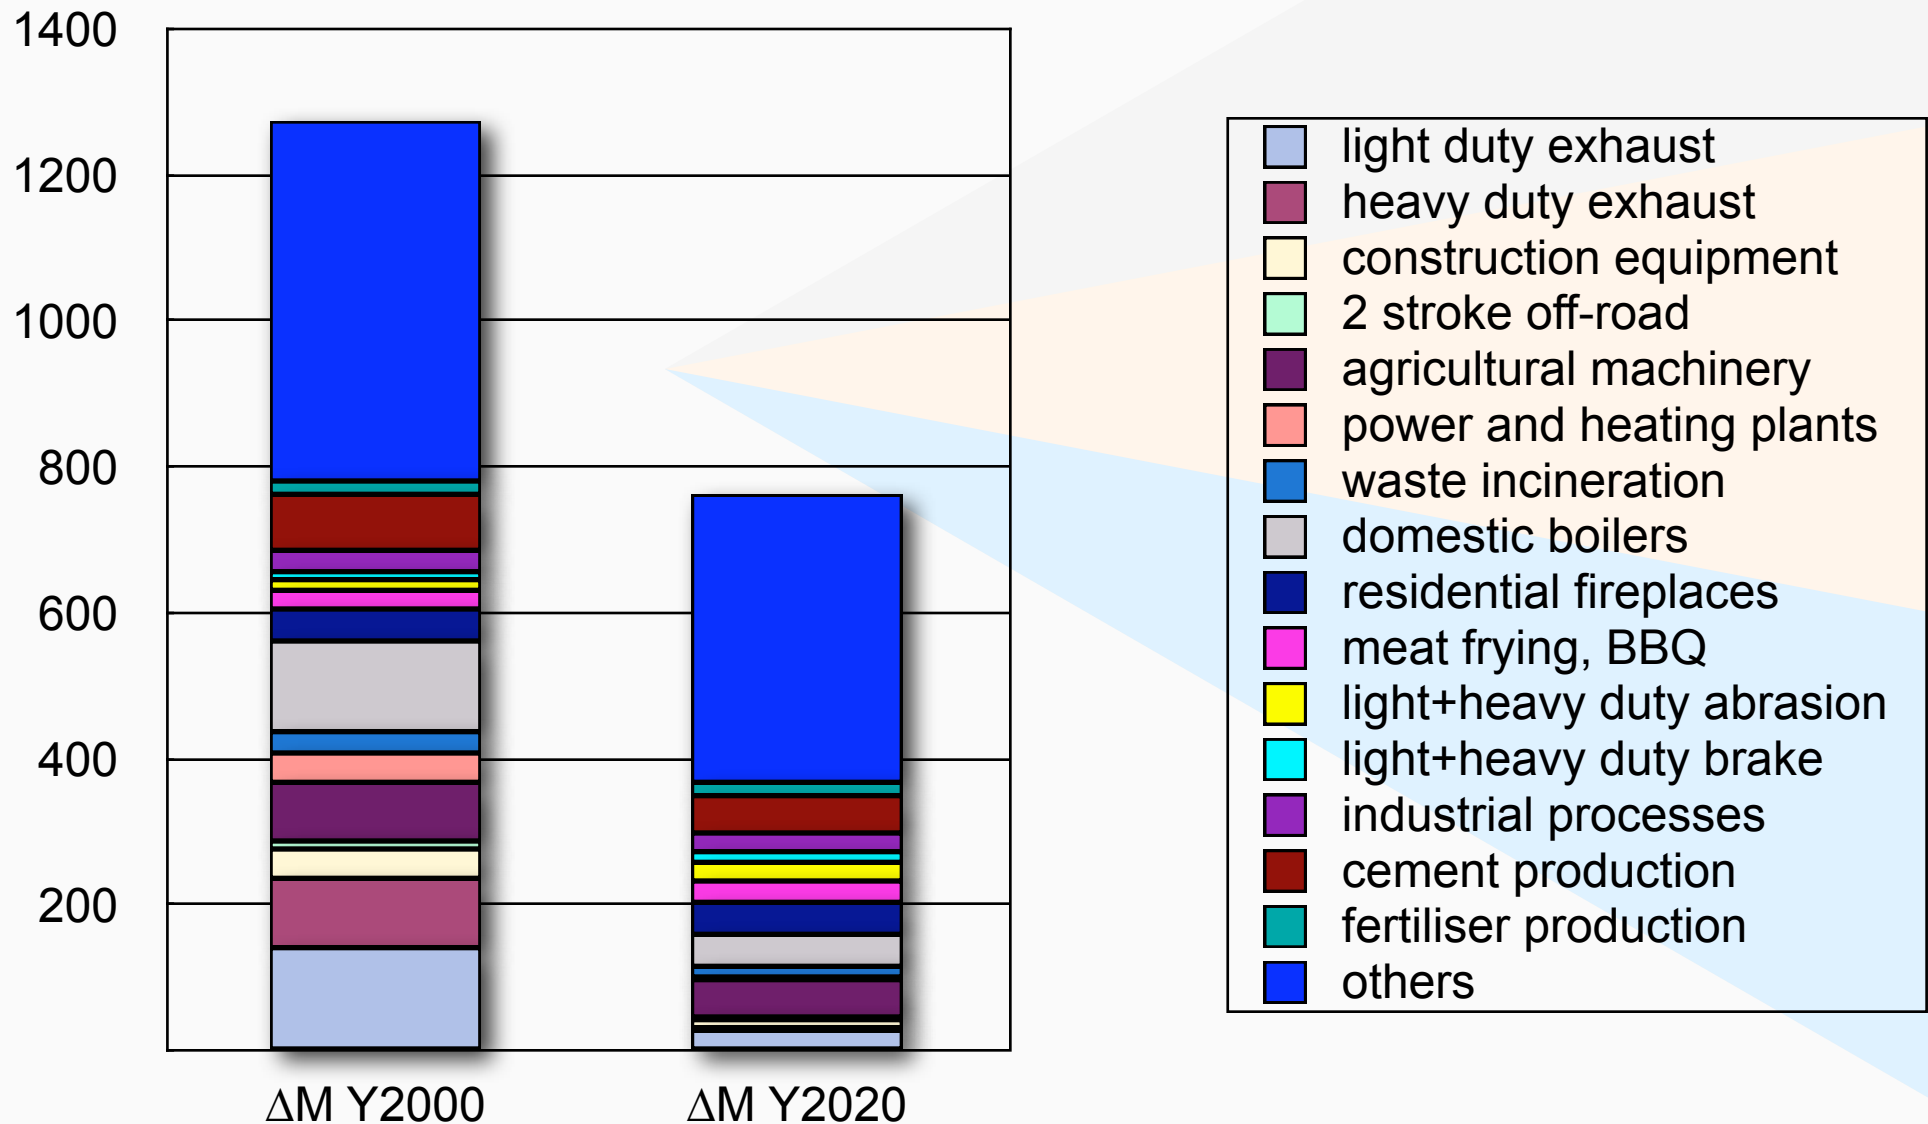

11th ETH Conference on Combustion Generated Nanoparticles

Zurich, 13th – 15th August, 2007

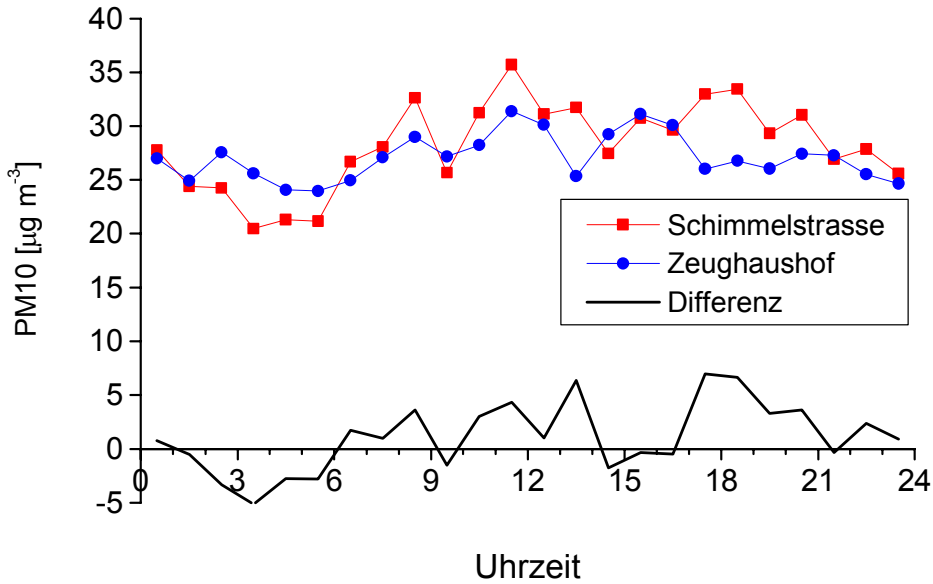

Particle Mass vs. Particle Number

PM2.5 Emissions in EU15 [kt/yr]

PM10-TEQ

- PM10 - dump in whatever you find below 10 μm ?
- generic characterisation of the nano zoo
- the (in)complete TEQ matrix
- roadmap and request for support

PM10-TEQ

- PM10 - dump in whatever you find below 10 μm ?
- generic characterisation of the nano zoo
- the (in)complete TEQ matrix
- roadmap and request for support

Chemische Zusammensetzung des Feinstaubs in Zürich (~50% sekundär!)

Hüglin et al., Atmos. Environ. 2005

* OM = 1.4 · OC

** calculated from Al

PCDD (Dioxines):

TEQ Sum is an Established Approach

only 7 out of 75 isomeres are highly toxic

PM10 Substance Classes

- carbon:
 - EC (fine, coarse)
 - OM / OC (overlap with pPAH)
 - pPAH
- inorganics:
 - NH₄⁺
 - NO₃⁻
 - SO₄⁻
- metals:
 - transition metals (all; overlap with individual metal oxides)
 - FeO
 - MgO
 - CaO
 - noble metals (all; maybe individual: Pt, Pd, Rh)
- minerals:
 - mineral dust (silicates, incl. Al, Mg, ...)
- ... ?

PM10-TEQ

- PM10 - dump in whatever you find below 10 μm ?
- generic characterisation of the nano zoo
- the (in)complete TEQ matrix
- roadmap and request for support

Toxicity Contributors

process	parameters	quantify
location of deposition	diffusion behaviour mobility change	mobility hygroscopicity
contact with body surface	soluble in water... ... or in oil?	solubility lipophilicity
translocation	diffusion; phagocytosis	mobility
interaction	bioavailability cytotoxicity radical generation potential DNA reactivity mutagenic potential carcinogenic potential	
excretion	biopersistence; active vs. statistical	decay time

TEQ Index Value

PM10-TEQ

- PM10 - dump in whatever you find below 10 μm ?
- generic characterisation of the nano zoo
- the (in)complete TEQ matrix
- roadmap and request for support

PM10-TEQ Matrix – preliminary

PM-Components	Carbon			Inorganics			Metals					Minerals
	EC (fine/coarse)	OM / OC (overlap with PAH)	pPAH	Ammonium NH ₄ ⁺	Nitrate NO ₃ ⁻	Sulfate SO ₄ ²⁻	Transition metals (Fe, Ni, V, Zn)	FeO	MgO	CaO	Noble Metals (Pt, Pd, Rh)	Mineral dust (Silicates, incl. Al, Mg)
Typical particle size [nm]												
MAK	0.02 ¹	–	1 ²	0.00066 ³	–	0.00066 ⁴	–	0.00066 ⁵	0.00066 ⁵	0.001 ⁶	1 ⁷	0.00066 ⁸
Solubility	1	1	1 ¹²	0.0027 ⁹	0.0017 ¹⁰	0.5025 ¹¹	–	1 ¹²	1 ¹²	0.6 ¹³	–	–
Hygroscopic	–	–	–	1 ¹⁴	–	1	–	–	–	1	–	1
Lipophilic ¹⁵	1	1	1	0.001	0.001	0.001	–	0.001	0.001	0.001	–	–

Toxicity	1 ^{17,18}	1 ^{17,18}	1	0.001 ¹⁹	0.001 ¹⁹	0.001 ¹⁹	–	0.001 ¹⁹	0.001 ¹⁹	0.001 ¹⁹	–	–
TEQ product												

- reduce the TEQ matrix
 - which components make up for ~90% of TEQ?
 - omit components with low TEQ index
 - omit contributors with little variation
- replace PM10 by 1-5 more relevant metrics

Summary

- PM10 is a poor indicator of health effects
- consider main components of PM10 separately
- assign toxicity index to each fraction
- calculate PM10 TEQ sum as health indicator
- expected lead substances: carbon and other insolubles
